1. Introduction

➤ Summary of the Problem:

In today's digital era, travel enthusiasts want to share their experiences online in an easy-to-navigate and visually appealing manner. However, creating a website that is both user-friendly and responsive can be challenging, especially for non-technical users. This project aims to design and develop the front-end of a Travel Blog using HTML and CSS, providing an easy-to-use platform for sharing travel stories, photos, and tips.

2. Background and Motivation

Travel blogging has become one of the most popular forms of online content, allowing travelers to document their experiences and share them with a global audience. The rise of mobile devices also means that websites must be responsive and work seamlessly across various screen sizes. Many users seek a lightweight, simple front-end solution that allows them to showcase their travels in a clean and modern layout.

The motivation for this project stems from the need to create a minimalist, responsive blog that focuses on ease of navigation, readability, and accessibility, using only HTML and CSS. This will allow the blog to load quickly and provide a better user experience on both mobile and desktop devices.

3. Goal, Objectives, and Scope

➤ Goal:

To develop a fully functional front-end of a Travel Blog using HTML and CSS, enabling users to share their travel experiences through blog posts and photo galleries.

➤ Objectives:

- Design a clean, modern layout for the blog using HTML.
- Implement responsive design principles using CSS to ensure compatibility with various screen sizes.
- Create blog post sections that highlight titles, dates, and summaries of travel stories.
- Integrate a photo gallery to display images from travel experiences.
- Ensure the design is lightweight and loads quickly on different devices.

➤ Scope:

The scope of this project is limited to front-end development. The focus will be on:

- Structuring the blog using semantic HTML elements.
- Styling the blog with CSS, including typography, colors, and layout.
- Ensuring responsiveness so that the blog works on mobile, tablet, and desktop screens.

➤ Out of Scope:

The project will not include back-end functionality, user login systems, content management systems, or database integration.

4. Proposed Solution

The Travel Blog front-end will consist of the following key features:

i. Home Page:

A landing page with a brief introduction and links to recent blog posts.

ii. Blog Post Section:

A section displaying travel blog posts, with a title, date, short description, and "Read More" links.

iii. Photo Gallery:

A gallery for users to showcase travel photos, with thumbnails and responsive design.

iv. Responsive Design:

The blog will use media queries to ensure it is mobile-friendly, with layouts that adapt based on screen size.

v. Navigation Bar:

A simple and clean navigation bar to link different sections of the blog, such as Home, Blog, Gallery, and Contact.

5. Resource Requirements

- HTML & CSS:

Front-end development tools for structuring and styling the blog.

- Text Editor:

Visual Studio Code, Sublime Text, or any preferred code editor.

- Web Browser:

Chrome, Firefox, or any other modern browser for testing the design.

- Design Resources:

Free resources from Google Fonts for typography and Unsplash/Pexels for sample images.

- Free Web Hosting:

GitHub Pages, Netlify, or any other free hosting solution for deployment.

6. Project Plan

Task	Week	Description
Project Proposal Submission	Week 1	Finalize the proposal and submit it
Design & Layout Planning	Week 2-3	Create a wireframe and plan the layout using HTML structure
Basic HTML Structure	Week 4-5	Build the HTML structure for all the main pages
CSS Styling	Week 6-8	Style the blog using CSS, focusing on responsive design
Add Blog Post Section	Week 9-10	Implement a section for blog posts, including titles and dates
Add Image Gallery	Week 11-12	Create a gallery with responsive image grids
Testing & Debugging	Week 13-14	Test the blog across multiple devices and fix any issues
Final Touches & Deployment	Week 15	Apply finishing touches, deploy, and write documentation
